Annex E
(normative)

ORM specifications

E.1 Introduction

This annex presents the specification of the standardized ORMs and associated RTs. If two or more object-fixed ORMs for the same object are specified then one of the ORMs is designated as the reference ORM for that object. Table E.1 in E.2.1 lists the reference ORMs specified in this International Standard, ordered alphabetically by their label. ORM specifications are listed in tables in E.2.2 according to object categories (abstract, Earth, other planet, satellites, and Sun) and binding type (object-fixed or dynamic). Table E.2 provides a directory of these tables. Parameter values in the tables are specified by value or by reference. Parameters specified by reference use the terminology in the cited references. Those terms are enclosed in brackets ({ }). Referenced values in length units other than metres are converted to metres to specify the corresponding RT parameter. Angular values are generally expressed in the units of radian. However, to avoid a loss of precision, some angular values are expressed in the units of arc second (″) or arc degree (°), as indicated.

Abbreviations used in labels in this annex are defined in Annex F.

E.2 ORMs

E.2.1 Reference ORMs

Table E.1 — Reference ORM directory

Object name	Type	Reference ORM label
2D modelling space	Abstract	ABSTRACT_2D
3D modelling space	Abstract	ABSTRACT_3D
Adrastea	Satellite	ADRASTEA_2000
Amalthea	Satellite	AMALTHEA_2000
Ariel	Satellite	ARIEL_1988
Atlas	Satellite	ATLAS_1988
Belinda	Satellite	BELINDA_1988
Bianca	Satellite	BIANCA_1988

Uranus	Planet	URANUS_1988
Venus	Planet	VENUS_1991

E.2.2 Standardized ORMs

The elements of an ORM specification are defined in Table 7.10. Table E.2 is a directory of standardized ORMs organized by category of ORM and type of object. The ORM entries in each table are ordered alphabetically by their label. The deprecated ORMs are specified in Annex J. ORM specifications may include one or more RT specifications. The RT specifications associated with an ORM are specified in a corresponding table as shown in Table E.2.

Table E.2 — ORM specification directory

ORM and RT specification tables	ORM table	RT table
Abstract ORM specifications	Table E.3	Table E.4
Object-fixed ERM specifications	Table E.5	Table E.6
Dynamic ERM specifications	Table E.7	n/a
Time-fixed instances of dynamic ERM specifications	Table E.8	Table E.9
Object-fixed planet (non-Earth) ORM specifications	Table E.10	Table E.11
Dynamic planet (non-Earth) ORM specifications	Table E.12	n/a
Time-fixed instances of dynamic planet (non-Earth) ORM specifications	Table E.13	Table E.14
Object-fixed satellite ORM specifications	Table E.15	Table E.16
Time-fixed instances of dynamic satellite ORM specifications	Table E.17	Table E.18
Stellar ORM specifications	Table E.19	Table E.20
Dynamic stellar ORM specifications	Table E.21	n/a
Time-fixed instances of dynamic stellar ORM specifications	Table E.22	Table E.23

Table E.3 — Abstract ORM specifications

ORM label	ORM code	Published name	Reference ORM	Binding information	Region	ORMT label	RD parameterization	References
ABSTRACT_2D	1	2D modelling space	This is the reference ORM for abstract 2D object-space.	none	Universal	BI_AXIS_ORIGIN_2D	n/a	none
ABSTRACT_3D	2	3D modelling space	This is the reference ORM for abstract 3D object-space.	none	Universal	TRI_PLANE	n/a	none

Table E.4 — Abstract ORM reference transformation specifications

ORM label	RT label	RT code	RT region	STT label and parameter values	Date published	References
ABSTRACT_2D	ABSTRACT_2D_IDENTITY	1	Universal	IDENTITY n/a (reference ORM)	n/a	none
ABSTRACT_3D	ABSTRACT_3D_IDENTITY	2	Universal	IDENTITY n/a (reference ORM)	n/a	none

NOTE 1: In Table E.6, when two references appear in the References element of an RT specification, the second reference, [GEOTRANS] or [EPSG], is the reference for the latitude and longitude values in the RT region element. The first reference listed is the reference for all other elements of such an RT specification, including the region name(s) in the RT region element. For non-Greenwich prime meridian RT specifications, the RT region longitude values are offset by ω_3, when applicable.

NOTE 2: For non-Greenwich prime meridian RT specifications in Table E.6, the RT parameters value, ω_3, is specified by this International Standard.

NOTE 3: In Table E.6, the phrase “Cycle number:” followed by an integer is appended to the References element of an RT specification to identify the non-zero cycle number in the reference from which the STT parameter values were obtained. When this phrase does not appear in the References element, cycle number zero is intended.

Table E.6 — Object-fixed ERM reference transformation specifications
